Great Auk

Pinguinus impennis [Linnaeus].

Now extinct. Formerly bred on rocky, isolated islands with easy access to the shoreline including Papa Westray (Orkneys), St. Kilda (off Scotland), Grimsey Island (off N Iceland), Geirfuglasker & Eldey Island (off SW Iceland), Funk Island (off NE Newfoundland), the Bird Rocks (Gulf of St. Lawrence) and probably the Faroe Islands & Cape Cod (Massachusetts) as well as other unknown sites. Prehistoric remains discovered in Florida (although they may have been brought there by humans, rather than naturally) and W Mediterranean. Wintered offshore in the N Atlantic. It was initially killed in large numbers for food and eggs by local inhabitants and later for its feathers. The last bird in Britain was captured in June 1840 on St. Kilda. In 1844 the last known pair were killed and their egg destroyed at Eldey Island, Iceland. The last live bird was seen on the Grand Banks of Newfoundland in 1852 (Halliday 1979). Other name: Garefowl.
